Ways That GEAR CLEAR™ Protects You And Your Passengers

GEAR CLEAR™ Venting Systems

Built to **Comply** with the **NFPA 1851** standard

1. ACTIVE VENTILATION SYSTEM

Actively eliminates **DOZENS** of airborne **GEAR CONTAMINANTS** from entering the vehicle, reducing further risk of toxins and carcinogens being inhaled, ingested or absorbed.

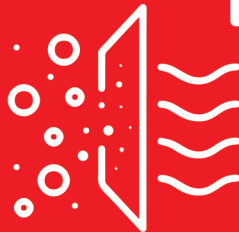

CLEAN CABIN AIR IS CONTINUOUSLY CIRCULATED

CONTAMINATED AIR IS ACTIVELY EXHAUSTED OUTSIDE OF THE VEHICLE

Air-tight enclosure, anti-backflow valves, and waterproof & dustproof exhaust fan constantly ensure no contaminants enter the passenger cabin.

2. 100% CHANGE OF AIR

Gear stays **WELL VENTILATED**. Clean air from inside the vehicle is continuously circulated through a graduated series of ducts that ensure a 100% change of air.

3. GEAR KEPT DRY

Keeps **TURNOUT GEAR** completely **DRY**, further preventing the transfer of contaminants once removed.

4. SHIELDS

Shields gear from **HARMFUL UV RADIATION** of direct sunlight.

5. KEEPS GEAR TEMPERATURE CONTROLLED

DON'T DRIVE THE FIRE AROUND WITH YOU!
